Select area and move selection. Select area and zoom in. Select area and zoom out. How to Install, Used and Made Easy. Adobe Photoshop Open the program that you want to install the extension in and open the extensions panel. At the bottom of the panel you will see the "Installation" link. Click on that to install the extension. Using the Extension: You don't have to do anything. EZlect will automatically preprocess the image you load into Photoshop and start to isolate the selection from the background. After that is done the plugin will allow you to start using it to quickly and easily select the objects from the background. EZlect Supported Features: Select area and move selection Select area and zoom in Select area and zoom out Eliminate semi transparent and near transparent areas Eliminate black background and white background Widen/narrow How do I use EZlect? Suppose you need to capture an image of the person you want to have your logo on. And you don't know how to use Photoshop and have limited time to learn. Well, what you can do in this situation is just come with a background with a child or a person. This way, you will be able to tell what is the person's face and what is the background and just take the area where the child's face is. So, you can have a black background with the background and a white child. That's how you can easily tell what is the child's face. For this example, I chose a photo of a baby's baby. Here are the steps needed to make that happen: 1. Save the file in.jpg with a high resolution and uncheck the rotate canvas. 2. In Photoshop, Create a new Photoshop document and choose Edit > Plugins > EZlect from the menu bar. You may see a popup box that asks you to install the plugin 3. Go ahead and click on Install to install the plugin. 4. In Photoshop's panel, switch the plug-in to active. 5. Open the menu and select Select -> EZlect. 6. Click on the black background and use the mouse to draw on the white area where the baby is looking at the camera. After that is done the baby's face will be selected

EZlect is an addon to Adobe Photoshop that allows you to select an object from any background that is made up of two or more items. All you have to do is load the image that contains the object you want to select in Adobe Photoshop, open the Select menu and click EZlect. EZlect will then open and start preprocessing the image. Once that is done, you can start using it to quickly and easily isolate objects from the background. EZlect is unique because it works quickly, with no screen lag. I am able to select objects from the Background in less than 30 seconds and in most cases it was less than 10 seconds. Because EZlect uses smart object detection technology, it is much more precise than many other selectors. It is also one of the few selectors that is able to do selections from a background that changes over time, such as a landscape shot where the sun sets, or even a moving object like a car. EZlect comes packed with tons of unique features that enhance the performance of the selector. EZlect Features: 1.) EZlect utilizes the amazing power of Photoshop to create a high performance image stabilizer to prevent screen lag. It does this by taking a picture of what you select and then using that image to compensate for the movement of the camera. 2.) With any other plugin it takes a few seconds to load and sometimes requires multiple tries before it appears in the selection menu. With EZlect it appears almost immediately. 3.) EZlect can detect changes in the size of the photo when doing selections from animated objects like cars. It will try to figure out if the car is moving and if it is, will change the amount of time you have to hover over the car so that it is not over an edge like a wall. 4.) EZlect can detect changes in the object that changes the size, shape or color. It will automatically figure out the image is not symmetrical so that it can adjust the size of the selection rectangle to account for that change. 5.) EZlect can detect if the background is transparent so that it can either add a mask or an adjustment layer based on that condition. 6.) EZlect does not require any advanced Photoshop knowledge. It comes packaged with a helpful guide that will walk you through the entire process of using EZlect. Uses EZlect to select an object from a background in a jpeg photo.
