You want to see what our exciting world of spanking has to offer? Let them know they are a naughty school girl with a new treat for her.Q: Open XML file as a Worksheet I've got the below code which opens and selects a specific worksheet from the currently opened document. For Each ws In ActiveDocument.Worksheets If ws.Name = " " Then ws.Select Else ws.Activate End If Next This code works fine. However, I want to open the Workbook file as a worksheet so that the user can then change the value in a specific cell and save it to a new file. I know how to do this manually but I am not sure how to incorporate it into the above code. Could you please advise how to do this? A: Save the workbook before opening it. Then when you are ready to close, load the worksheet. You could probably use the SaveAs method of Workbook to save the file as a worksheet, but I'm not sure that will give you access to the name of the file. Here's a working example of saving the workbook: Dim wb As Workbook

Set wb = ThisWorkbook wb.SaveAs "myNewFile.xlsx" Fostering the national conversation about robotics, artificial intelligence and the future of work. Thursday, September 22, 2016 A Step Toward The Future This piece is part of the CIO Center's series, A Step Toward The Future, where we explore new approaches and technologies that can help us navigate the next phase of our lifetimes, including the potential of Robotics and Artificial Intelligence. Welcome to the AI age. Our technology has evolved far beyond the "science fiction" we've seen in the movies. Many of us, if not most, have witnessed advancements in Artificial Intelligence, or AI. It is helping doctors diagnose disease, keeping our airliners safe in the air, and it is working alongside humans in some of the most high-stress jobs. There are signs that AI is on the verge of further expansion. AI is becoming mainstream, and businesses of all sizes are trying to apply it to new areas 82157476af
